What is Google Analytics?

In connection with the website of the Organization, it uses the services of the Google Analytics system. Google Analytics is Google's analytics tool that helps you get a better picture of the activities of your website visitors (including your activities) and website performance without identifying visitors individually.

The primary purpose of the data collected by the Google Analytics cookie and their use is to enable the Organization to operate its website properly, which requires, in particular, tracking website visit data (e.g. number of visits, device usage). In addition, the Organization may use this information to analyze usage trends and to improve and develop the functionality of its website and to analyze the performance of the website.

Because Google Analytics comes from a third-party 3rd party provider (Google Inc.), the information it collects (including data from your activity on the website) may be used by Google, for example, to show more relevant ads across the web on Google services (such as Google Search) and to measure interactions with ads served by Google. Google may also transfer this data to third parties that Google uses to process the data.

You can find more information about the processing and use of data by Google Analytics and Google's privacy policy at the following links:
